DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1,4,7,10,13,14,19,20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is

Art Unit: 1794

(a) merely exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949).

In the present instance, claim 1 recites the broad recitation of particulate units 1 micrometer to 3 cm, and the claim also recites nanoscale range for the same particulate units which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1,4,7,10,13,14,19,20 are rejected under 35 U.S.C. 102(b) as being anticipated by Geiser'448.

See Geiser'448, Abstract, figures, Summary of the Invention, column 2, bottom – column 3, lines 1-35 and claims.

The amendments and remarks filed by Applicants in their response on May 16, 2007 have been fully considered. The claims, however, remain unpatentable in view of the above rejections.

Regarding the rejections based on 35 USC 112, applicants have argued that the amendments correct deficiencies of the original claims. The examiner, however, points out that he believes that claims are still not clear. It appears that applicants attempt to distinguish two types of dimensions in the claimed particulate units. One is "size" and the other is "dimension"? Claims do not state what is a difference between them or describe what is the shape of particulate unit. In dependent claims applicants claim for example the thickness of the particulate unit as being of nanoscale. This is inconsistent with the claimed size of 1-3 micrometers.

In response to the Applicants arguments the examiner submits that the prior art cited substantially teaches the claimed invention as in the above rejections. The prior art particles have "multiple diameters" of the size within the claimed particle sizes. Also, the prior art particles have grooves of a specified dimensions that imposes edges and other shapes on particles of the sizes within the claimed sizes. The rejections are believe to be proper and are maintained.
